YUE SUN

4514 8th Ave NE, Apt 6, Seattle, WA, 98105 2069103421, yuesun@uw.edu

EDUCATION

University of Washington Seattle, WA, US
Ph.D. candidate in Electrical Engineering start from 2016.9
Academics: Overall GPA 3.82/4

Tsinghua University Beijing, China
Bachelor of Engineering in Electronic Engineering 2012.8 - 2016.7
Academics: Overall GPA 89.2/100

Programming: Python, Matlab, JAVA, C/C++; Pytorch, Keras, Tensorflow, Scikit-learn, Xgboost; Spark; AWS

Key Words: Nonconvex Optimization, Compressive Sensing, Control, Representation Learning

WORKING EXPERIENCE

Nokia Bell Labs, Math & ALGO Bell Labs Summer Intern remote, US
Project: Audio Echo Cancellation with Sparse Coefficients 2021.6 - 2021.8
Host: Shirin Jalali

- Reframed audio echo cancellation problem as online least squares.
- Implemented online LS algorithms including SGD, tail averaged SGD, APA, IML, Catalyst.
- Combined with sparsity of the parameters, incorporated RIP of circulant matrix into algorithm analysis. Derived and implemented proportionate algorithms and regularized algorithms for sparse coefficient estimation.

Google, Software Engineering Intern (PhD) Mountain view, CA, US
Project: Online Learning for Entropy Coding in Next-generation Video Codec 2019.6 - 2019.9
First authored paper in **DCC 2020***, Host: Jingning Han*

- Implemented online update algorithm for probability estimation for entropy coding.
- Generalized baseline algorithm by maximum apriori estimator, wrapped baseline algorithms with an adaptive layer based on online optimization for model ensembling.
- Implemented experiments on real dataset and the compressed file is 2% smaller than baseline (**C++ & python**).

RESEARCH EXPERIENCE

Papers published in **NeurIPS, CDC, ICASSP, L4DC, ICML workshop, TSP**

University of Washington, Research Assistant Seattle, WA, US
Project: Towards Understanding the Role of Representation Dimension in Meta-Learning start from 2020.9
First/second authored paper accepted by **NeurIPS 2021, TOPML 2021, ICASSP 2021***, Advisor: Maryam Fazel*

- Demonstrated the procedure and obtained statistical guarantee (sample complexity & error) of meta-learning.
- Obtained guarantee of meta-learning accuracy in the overparametrized regimes, theoretically proved the double descent phenomenon and verified it by numerical experiments.
- Generalized to non-linear models, e.g., multiple class classification, validated on image (CNN/Resnet) and text (LSTM/attention/transformer) classification with MAML as baseline (**python/pytorch, AWS**).

Project: Learning Linear Dynamical System via Regularization start from 2018.10
First authored paper **(oral)** *in* **L4DC 2020***, Advisor: Maryam Fazel*

- Obtained optimal error rate of unregularized method for linear system identification.
- Learning with provably fewer data and smaller error by Hankel nuclear norm (low rank) regularization.
- Implemented regularized method on Daisy, Gym and Mujoco dynamical systems and observed the advantage in input sensitivity, simplicity of tuning parameters, training data size and estimation error (**python/pytorch**).

Side Project: Learning Yelp Votes Data

- Used **Python/Pandas** and **Python/Seaborn** for visualizing and preprocessing Yelp votes data. Implemented neural networks for learning (**Python/Pytorch & Pyspark**).
- Processed text by transformer (**Python/Pytorch**). Compared error of NNs' with different depth and structure.
- Implemented the entire model by ensemble learning (**Python/Xgboost, AWS**).

Project: Policy Gradient Descent in Control and Reinforcement Learning — start from 2018.10
First authored paper in **CDC 2021**, *Advisor: Maryam Fazel*

- Proposed a generic approach to connect policy gradient method to convexification method.
- Generalized from static controller to dynamic controller design, and proposed the convergence guarantee of policy gradient method when quadratic invariance holds.

Simons Institute for the Theory of Computing, Visiting Graduate Student — Berkeley, CA, US
Project: Perturbed Gradient Descent Method for Non-convex Optimization — 2017.9 - 2017.12
First authored paper in **NeurIPS 2019, ICML workshop 2018**

- Derived convergence rate of noisy gradient descent method for nonsmooth nonconvex optimization problems and extended approximation strategy to Riemannian metric.
- Applied to image processing task where the retraction operator is trained by conditional GAN (**python/tensorflow**).

Ohio State University, Research Assistant — Columbus, OH, US
Project: Phase Retrieval and Low Rank Matrix Completion — 2015.7 - 2015.9
First/second authored papers in **ICASSP 2016, TSP**, *Advisor: Yuejie Chi*

- Reproduced the derivation and conduced performance test for various phase retrieval algorithms.
- Derived an extension of Wirtinger Flow algorithms by expanding it from rank 1 case to low rank case. Analyzed the convexity of L1 distance function and its advantages with outliers.
