

YUE SUN

yuesun9308@gmail.com

EDUCATION

University of Washington

Ph.D. in Electrical Engineering

Academics: Overall GPA 3.83/4

Thesis: *Nonconvex Optimization and Model Representation with Applications in Control Theory and Machine Learning*

Seattle, WA, US

2016.9 - 2022.3

Tsinghua University

Bachelor of Engineering in Electronic Engineering

Academics: Overall GPA 89.2/100

Beijing, China

2012.8 - 2016.7

WORKING EXPERIENCE

Microsoft, BingAds team, Software Engineer

Project: Advertisement Recommendation

Seattle, WA, US

2022.4 - present

- Preprocessed the dataset of user behavior on Ads to count embedding coverage and prepare for downstream learning process with **SCOPE(SQL)** and **python**.
- Applied BERT for initial embedding of URL/user/Ads. Trained downstream CNN and TwinBERT models for predicting user-Ads and URL-Ads click-through rate (**python/pytorch** on GPU).
- Modeled commercial URL classification using semi-supervised learning, and modeled URL-Ads recommendation (user-blind recommendation) by maximum apriori estimator and online learning, with demos in **python/pytorch**.
- Maintained inference pipeline of embedding generation and user-Ads matching (**SCOPE(SQL)**, **Spark**, **Kafka**)

Nokia Bell Labs, Math & ALGO Bell Labs Summer Intern

Project: Audio Echo Cancellation with Sparse Coefficients

Host: Shirin Jalali

Seattle, WA, US

2021.6 - 2021.8

- Reframed audio echo cancellation problem as online least squares and implemented SGD, APA, IML, Catalyst.
- Combined with sparsity of the parameters, incorporated RIP of circulant matrix into algorithm analysis. Derived and implemented proportionate algorithms and regularized algorithms for sparse coefficient estimation.

Google, Software Engineering Intern (PhD)

Project: Online Learning for Entropy Coding in Next-generation Video Codec

First authored paper in DCC 2020, with a patent. Host: Jingning Han

Mountain view, CA, US

2019.6 - 2019.9

- Implemented online update algorithm for probability estimation for entropy coding.
- Generalized baseline algorithm by maximum apriori estimator with online optimization for adaptive learning.
- Implemented experiments on real dataset and the compressed file is 2% smaller than baseline (**C++ & python**).

RESEARCH EXPERIENCE

Papers published in **NeurIPS**, **CDC**, **ICASSP**, **L4DC**, **ICML workshop**, **TSP**

University of Washington, Research Assistant

Project: Towards Understanding the Role of Representation Dimension in Meta-Learning

First/second authored paper accepted by NeurIPS 2021, TOPML 2021, ICASSP 2021, Advisor: Maryam Fazel

Seattle, WA, US

2020.9 - 2022.3

- Demonstrated the procedure and obtained statistical guarantee (sample complexity & error) of meta-learning.
- Obtained guarantee of meta-learning accuracy in the overparametrized regimes, theoretically proved the double descent phenomenon and verified it by numerical experiments.
- Generalized to non-linear models, e.g., multiple class classification, validated on image (CNN/Resnet) and text (LSTM/attention/transformer) classification with MAML as baseline (**python/pytorch**, **AWS**).

Project: Learning Linear Dynamical System via Regularization

First authored paper (oral) in L4DC 2020, Advisor: Maryam Fazel

2018.10 - 2022.3

- Obtained optimal error rate of unregularized method for linear system identification.
- Learning with provably fewer data and smaller error by Hankel nuclear norm (low rank) regularization.
- Implemented regularized method on Daisy, Gym and Mujoco dynamical systems and observed the advantage in input sensitivity, simplicity of tuning parameters, training data size and estimation error (**python/pytorch**).

- Proved the global convergence of non-convex policy optimization for a generic family of optimal control problems.
- Proposed the connection between policy optimization in RL and convexification method in control theory.

Simons Institute for the Theory of Computing, Visiting Graduate Student

Berkeley, CA, US

Project: Perturbed Gradient Descent Method for Non-convex Optimization

2017.9 - 2017.12

First authored paper in NeurIPS 2019, ICML workshop 2018

- Derived convergence rate of noisy gradient descent method for nonsmooth nonconvex optimization problems and extended approximation strategy to Riemannian metric.
- Applied to image processing task where the retraction operator is trained by conditional GAN (**python/tensorflow**).

Ohio State University, Research Assistant

Columbus, OH, US

Project: Phase Retrieval and Low Rank Matrix Completion

2015.7 - 2015.9

First/second authored papers in ICASSP 2016, TSP, Advisor: Yuejie Chi

- Reproduced the derivation and conducted performance test for various phase retrieval algorithms.
- Derived an extension of Wirtinger Flow algorithms by expanding it from rank 1 case to low rank case. Analyzed the advantages with outliers.
